6	▼ Design and Planning													
9	Configuring the project structure													
10	Wireframing													
11	Updating requirements													
12	▼ Designing the database / backend													
13	ER diagram													
14	UML diagram													
19	▼ Feature Prototype			_										
20	▼ Frontend - Basic UI													
33	Build basic UI components for user profile													
21	▼ Frontend - Routes and Views													
34	Set up routes and views for profile and sch													
22	▼ Backend - Express Routes													
35	Define Express routes for user profile and													
36	Implement basic logic.													
27	▼ Backend - Data Handling													
37	Implement data handling for user profiles a													
28	Backend - Testing													
38	Test basic functionality of the Node.js feat													
39	Gather initial feedback.													
40	▼ Documentation													
	Documentation Document the feature prototype.													
41	Outline the available routes and basic func													
23	Development													
30	▼ Registration app													
31	 Implement basic authentication logic. Create the registration models. 													
66														
70	Create the registration forms. Create the registration views.													
67	Create the registration views.													
68														
80	Create simple oppositing process				-									
32	Create simple onboarding process.						_							
24	▼ Tennis app Create the tennis models.													
71	Create the terms models.													
69	Create the tennis rorms.													
72	Create the tennis views.													
81	Conduct unit testing.													
43	Implement basic UI for learning resources													
26	▼ Planner app													
53	Create the planner views.													
54	Create the planner views. Create the planner templates.													
73	Build the calendar.													
74	Build the calendar's structure.													
75	Integrate the calendar with the TennisSes													
82	Conduct unit testing.													
76	 Conduct unit testing. ▼ Community app 													
77	Create the community models.													
	Create the community models. Create the community views.													
78 79	Create the community views. Create the community templates.													
83	Conduct unit testing.													
55	 ✓ User Experience Refinement 													
56	Gather user feedback on the integrated sy													
57	Make improvements to the user experience.													
58	 ▼ Final Adjustments and Testing 													
64	Optimise the performance of the app													
65	Optimise the performance of the app.													
59	▼ Write Up													
60	Document the project.													
61	Outline the functionality.													
62	Reflect on the entire process.													
63	Evaluate the project.
